OBJECTIVE

Data Analyst with a strong foundation in SQL, Python, Excel, and Power BI. Skilled in cleaning, analyzing, and visualizing data to generate insights and support data-driven decision-making. Interested in collaborating on meaningful analytical work in fast-paced environments.

SKILLS AND INTERESTS

Data Visualization Tools	Advanced MS Excel, Power BI
Programming and Querying	SQL, Python, Big Data Analysis, AWS
Analytical Abilities	Data Cleaning, Exploratory Data Analysis (EDA), Insight Generation, Descriptive Statistics, ETL process

INTERNSHIP

Data Engineer Intern – Alt Dynamics Pvt Ltd , jun 2024 - Nov 2024

- Built a scalable data pipeline on AWS (S3, EMR, EC2, Step Functions) for processing data from S3, Snowflake, and Web API sources.
- Designed and managed PySpark ETL jobs, with four extraction jobs and a master job for transformations, loading data into S3 and Elasticsearch.

PROJECTS

Power BI Retail Sales Analytics Dashboard — Blinkit

- Performed in-depth analysis of Blinkit retail sales data to monitor total revenue, average sales value, product count, customer ratings, and outlet-level performance.
- Created an interactive Power BI dashboard leveraging DAX measures, slicers, donut charts, line graphs, and tables to assess category-wise sales, outlet size effectiveness, location impact, and fat-content contribution.
- Extracted actionable insights on high-performing product categories, profitable outlet tiers, and key revenue drivers to support inventory optimization and strategic retail planning.

Power BI Music Analytics Dashboard — Spotify

- Analyzed Spotify streaming data using Power BI to evaluate distinct songs, artist count, song duration, popularity scores, release trends, and hit performance across artists, albums, and years.
- Developed an interactive Power BI dashboard using DAX measures, slicers, KPI cards, bar charts, donut charts, line charts, and tables to visualize artist-wise popularity, album type distribution, explicit vs non-explicit content, and monthly popularity trends.
- Designed a Spotify-themed, user-friendly dashboard layout with dark UI, consistent color palette, navigation tabs (Overview, Artists, Songs), and media-style visuals, enabling intuitive exploration of music trends and performance insights.

Power BI Sales Analytics Dashboard — Mobile Sales Performance

- Examined mobile sales transaction datasets in Power BI to measure overall revenue, average selling price, units sold, and transaction frequency across cities, brands, and time periods.
- Built dynamic dashboards using DAX calculations, slicers, KPI indicators, maps, and trend visuals to analyze city-level sales reach, brand contribution, payment method usage, and month-wise quantity trends
- Delivered a structured, executive-style dashboard with geographic and comparative insights, helping stakeholders evaluate market performance, benchmark brands, and uncover growth opportunities.

Excel Sales Analytics Dashboard — VIEW (Visionary Insights for Earning and Wins)

· Analyzed multi-city company sales data in Microsoft Excel to evaluate total sales, target achievement percentage, performance gaps, and sales executive performance.
· Built an interactive Excel dashboard using Pivot Tables, Pivot Charts, slicers, and formulas to identify top and bottom performers, enabling data-driven sales planning and performance optimization.

Excel Healthcare Analytics Dashboard — HEAL (Health Experience and Activity Log)

· Evaluated hospital operations data in Microsoft Excel to track patient volume, average wait time, admission status, and patient satisfaction metrics.
· Constructed an interactive Excel dashboard using Pivot Tables, charts, slicers, and formulas to highlight age-group trends, department-wise patient flow, service delays, and resource utilization.

Hadoop Semi-Structured Data Processing Using Avro ,

· This project describes how to Transfer data from RDBMS to HIVE in a incremental manner using Sqoop jobs.
· Transferred data incrementally from RDBMS to Hive with Sqoop, storing data in Avro format and loading into HDFS directories and Hive staging tables.
· Automated incremental data appends to Hive tables and handled schema evolution using Unix shell scripts.

Spark Hive Complex JSON Data Processing ,

· Loaded data from WebAPI and HDFS into Spark, created DataFrames for complex JSON data, and managed data flow through multiple staging areas for analysis.
· Developed PySpark code for data ingestion, cleansing, and transformation, storing processed data in HDFS directories and Hive tables to enable predictive analytics.
· Integrated data from HDFS and WebAPI, enhancing data quality and consistency for improved predictive insights.

CERTIFICATES

· A course in Big Data analytics in Zeyobron Analytics

· Python with Data Structures, Databases, and Data Science Certificate No. - PYTHDE194

. Data Analytics Masters 2026 -From Basics To Advanced

. Be10X Platform - AI And Analytics - Ongoing

EDUCATION

Bachelor of Technology in Computer Engineering 2020 - 2024
Shivajirao S. Jondhale College of Engineering, Dombivli. CGPA : 8.74/10

State Board, Class XII 2019 - 2020
K. M Agrawal College, 61.08%

State Board, Class X 2017 - 2018
Lok Kalyan Public School, 80.60%
